

Valora

For Lenders & Debt Funds

The Problem

- Borrowers submit appraisals built on optimistic assumptions
- Credit teams manually stress-test before committee — takes time and still misses things
- One wrong assumption on a £50m loan can be catastrophic
- Jurisdiction-specific tax and finance structures are frequently modelled incorrectly

What Valora Does

Valora gives lenders an independent, AI-powered sanity check on any borrower appraisal in minutes. Model the deal yourself, stress-test every assumption, and walk into credit committee with a clean independent view.

Key Features for You

DSCR / ICR — Automatic debt service coverage from NOI — flags covenant breach risk instantly

Debt Yield — $\text{NOI} \div \text{loan amount}$ — lender return metric independent of cap rate compression

LTV at Exit — $\text{Loan balance} \div \text{exit value at maturity}$ — residual exposure at loan repayment

Peak Loan Balance — Maximum drawn exposure at any point during construction or hold

Sensitivity Matrix — $\text{Exit cap rate} \times \text{ADR/rent stress}$ — shows exactly where the deal breaks

AI Sense Check — Jurisdiction-aware — flags aggressive assumptions a credit analyst would challenge

Actual NOI Mode — Input the borrower's real operating NOI and model the gap vs normalised

What You Can Model

Metric	What it shows	Lender benchmark
DSCR / ICR	$\text{NOI} \div \text{annual debt service}$	Min 1.25× (covenant standard)
Debt Yield	$\text{NOI} \div \text{loan amount}$	Min 6–8% depending on asset
LTV at Exit	$\text{Loan} \div \text{exit value}$	Max 65–75% senior debt
Peak Loan	Max drawn during programme	LTC typically 60–70%
IRR (Unlevered)	Project return before debt	Min 8–12% for development risk
Sensitivity	Stress scenarios in one matrix	Credit committee ready

Platform Coverage
